Office Action Summary

Application No.

09/727,949

Applicant(s)

SHUTT ET AL.

Examiner

Igor Borissov

Art Unit

3629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 August 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farris et al. (US 5,881,131).

Farris et al. teach a method and system for provisioning network related facilities, comprising:

As per claims 1, 10-11 and 13,

- receiving a customer request for a circuit between said at least two terminal points (Abstract; column 32, lines 36 -40);
- evaluating a plurality of network parameters relating to said customer request (column 34, lines 12-26);
- linking a plurality of network segments from a plurality of networks wherein said plurality of network segments is linked via at least one facilitator-controlled exchange facility to form a provisioned circuit between said at least two terminal points (column 32, lines 35-40, 46-48; column 33, lines 42-45; column 34, lines 20-22);
- providing access to the provisioned circuit to said customer (Abstract; column 32, lines 35-40, 46-48; column 33, lines 42-45; column 34, lines 20-22).

Farris et al. do not specifically teach that the plurality of networks are provided by plurality of transport suppliers.

It would have been obvious to one having ordinary skill in the art to modify Farris et al. to include that the plurality of networks are provided by plurality of transport suppliers, because it appears that the claimed features do not distinguish the invention over similar features in the prior art, and the teachings of Farris et al. would perform the invention as claimed by the applicant either with specifically teaching the transport suppliers, or not.

As per claim 2, Farris et al. teach said method and system wherein said step of evaluating a plurality of network parameters further comprises consulting a database of information relating to available network segments from separate transport suppliers (column 32, line 56 through column 36, line 42).

As per claim 3, Farris et al. teach said method and system wherein the database is updated to reflect the information relating to available network segments on a real-time basis (column 32, line 56 through column 36, line 42).

As per claim 4, Farris et al. teach said method and system, further comprising the step of providing a plurality of network parameter options to the customer before the step of linking said plurality of network segments to form the provisioned circuit (column 5, lines 57-67; column 33, lines 36-42).

As per claim 5, Farris et al. teach said method and system, further comprising the steps of identifying at least one customized circuit option; and providing said at least one customized circuit option to the customer before the step of linking said plurality of

Art Unit: 3629

network segments to form the provisioned circuit (column 5, lines 57-67; column 35, line 59 through column 36, line 47).

As per claims 6 and 14, Farris et al. teach said method and system wherein the step of identifying at least one customized circuit option further comprises the step of filtering a plurality of available circuit options with respect to at least one network parameter provided by the customer (column 5, lines 57-67; column 35, line 59 through column 36, line 42).

As per claims 7 and 15, Farris et al. teach said method and system wherein the customer request is received into an automated ordering and provisioning system (column 17, lines 3-26; column 38, lines 15-36).

As per claims 8 and 16, Farris et al. teach said method and system wherein the customer accesses the ordering and provisioning system via the Internet (column 20, line 5 through column 30, line 38).

As per claim 9, Farris et al. teach said method and system wherein the segments are linked using an automated ordering and provisioning system (column 17, lines 3-26; column 38, lines 15-36).

As per claim 12, Farris et al. teach said method and system, further comprising the step of providing a single point of contact for said customer in connection with billing and circuit maintenance procedures from said transport suppliers relating to said network segments (column 17, lines 3-26).

As per claim 17, Farris et al. teach said method and system wherein said facilitator further comprises a software program running on a server (column 20, line 5 through column 30, line 38; column 32, line 36 through column 36, line 42).

As per claim 18, Farris et al. teach said method and system wherein said facilitator further comprises at least one human operator (column 35, lines 20-22; column 38, lines 4-9, 3946; column 47, lines 18-45).

As per claims 19 and 20, Farris et al. teach said method and system, comprising:

- at least one processing server in connection with a plurality of customers (column 20, line 5 through column 30, line 38; column 32, line 36 through column 36, line 42);
- a database resident on said at least one processing server, wherein the database is updated on a regular basis with information related to a plurality of network segments of a plurality of transport suppliers, and wherein said information is received from said plurality of transport suppliers (column 32, line 56 through column 36, line 42);
- a plurality of exchange facilities in communication with said at least one server for facilitating the linking of the network segments (column 32, line 36 through column 36, line 42);
- logic software resident on said at least one server and in communication with the database and the facilities to automate the linking of said network segments via said exchange facilities to form a provisioned circuit in accordance with a customer request

Art Unit: 3629

(column 20, line 5 through column 30, line 38; column 32, line 36 through column 36, line 42).

As per claim 21, Farris et al. teach said method and system, further comprising means for evaluating said database information and means for providing a plurality of circuit options in accordance with said customer request (column 32, line 56 through column 36, line 42).

Response to Arguments

In response to applicant's argument that Farris et al. fail to show linking a plurality of network segments, the examiner points out that Farris et al. do show/suggest this feature (See: column 32, lines 35-40, 46-48; column 33, lines 42-45; column 34, lines 20-22).

Conclusion

This office action is not made final.

Any inquiry concerning this communication should be directed to Igor Borissov at telephone number (703) 305-4649.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Receptionist whose telephone number is (703) 872-9306.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's Supervisor, John Weiss, can be reached at (703) 308- 2702.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Art Unit: 3629

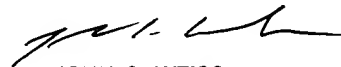

Washington D.C. 20231

or faxed to:

(703) 872-9306 [Official communications; including After Final
communications labeled "Box AF"]

Hand delivered responses should be brought to Crystal Park 5, 2451 Crystal
Drive, Arlington, VA, 7th floor receptionist.
